Job market	Agricultural Credit and Women's Agency: Experimental Evidence from India		
Paper	(with Berber Kramer, Patrick Ward and Subhransu Pattnaik) Women-focused programs raising income and agency are costly and difficult to implement, and evaluations show that targeted cash transfers and loans are often appropriated into assets and enterprises outside women's control. We hypothesize that improving liquidity constraints for households increases household consumption and residual income for individual members, and evaluate its consequences for women. We test this using a randomized provision of collateral-free loans across 80 villages in India. Employing IV estimations, we find that women in loan-receiving households report independent access to banking services through debit cards and mobile phones, and allocate more time towards leisure. Households increase ownership of productive capital and consumer durables in response to the program but there are no impacts on agricultural productivity or income. The findings suggest that agricultural credit programs can serve as an effective and cost-efficient tool to improve women's outcomes, even when not directly targeted at them.
